

Sunweb takes advantage of solution Storage Architects

Tour operator Sunweb has taken a central storage solution from Storage Architects into use for its own Creative Studio.

Lander Vanraes, Art Director at Sunweb, started looking for a solution to replace the existing and outdated storage." During the Corona pandemic we could no longer go to our office in Rotterdam and we had to do the creative work from home. With a lot of copying of data and inefficiency as a result. We were therefore not only looking for fast edit storage but also a solution that enables "Remote Editing". In other words, to be able to edit and review videos and images location-independent and remotely. After having seen several solutions, it turned out that Storage Architects came up with the right one: the **EVO of Studio Network Solutions.**"

"Now that we have been working with EVO for a few months, I notice that the speed and efficiency in our workflow have significantly improved. The one day, for example, footage is shot in Austria, this footage is placed overnight from this location on the EVO and the next day we can work with it in post-production from the office, at home or anywhere in the world. Something that used to take a few weeks can now sometimes even be done in a few hours."

Edwin Middeljans, co-founder and consultant at Storage Architects, explains: "After an analysis of the current situation and especially the workflow of Sunweb from ingest, approval process to publication, we came up with the EVO. The EVO is a specially developed system for video editing with strong integrations with Adobe Creative Cloud, Apple and AVID edit applications. The performance provided by the installed EVO configuration can handle 4K resolutions and offers a very strong price/functionality ratio. An ideal solution for Creative Studios such as Sunweb's."

"The speed and efficiency in our workflow have significantly improved with the EVO. Something that used to take a few weeks can now sometimes even be done in a few hours."

Jos van Duijn, Head of Architecture & Security at Sunweb, adds: "Providing remote access to central systems always involves security risks. We have therefore had several conversations about this with Storage Architects and submitted our Security requirements to them. They have thought about this with us and have come up with a good solution to integrate the EVO into our secure network."

About Sunweb

Since 2000, Sunweb has been offering affordable air holidays and winter sports trips to destinations within and outside Europe. At present, Sunweb Group GmbH is one of the largest tour operators

in Europe with around 1 million customers per year and more than Euro 700 million turnover. With 400 employees and multiple brands, Sunweb is active in seven international markets: the Netherlands, Belgium, Denmark, Sweden, the United Kingdom, Germany and France.

Go to www.sunwebgroup.com for more information about Sunweb Group GmbH and the other brands.

About Storage Architects BV

Storage Architects BV specializes in all aspects of digital storage. Storage for VMware, Enterprise File Storage, Backup & Disaster Recovery, Business Continuity, Archiving and (Hybrid) Cloud.

By carrying out hundreds of projects over the past 26 years, expertise and experience have been built up in sectors such as Media & Entertainment, Industry & Production and Life Sciences. This knowledge and expertise is applied in designing new architectures, selecting the most suitable technology, implementing, maintaining or managing it. Storage Architects stands for expert advice, long-term relationships and clear choices.
